

SquashGym Website

Digital Technologies 3.4 - Use complex techniques
to develop a digital media outcome

Features

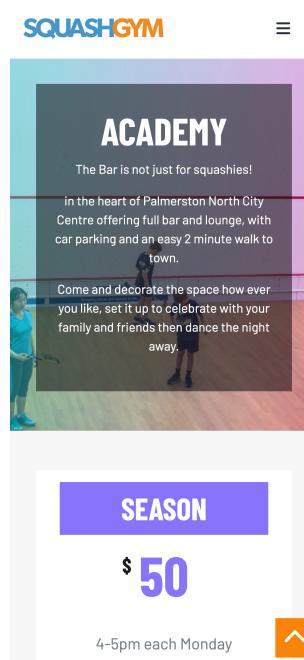

Responsive Styling (mobile)

The file 'responsive.css' contains styles that resize elements to ensure usability on mobile devices. Whilst testing certain elements did not resize correctly resulting in a poor user experience. The functionality requirement found in the testing document stated that the website must work on a variety of screen sizes as this could influence whether or not a user would continue using the website.

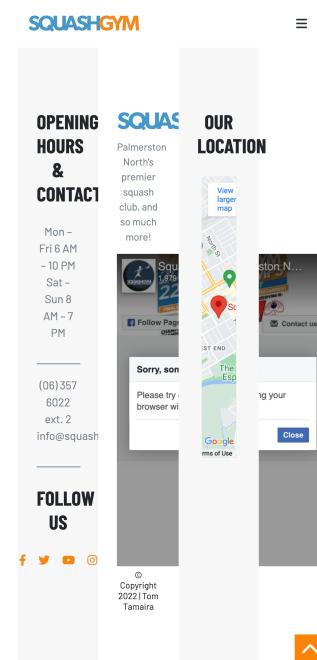

Without responsive.css

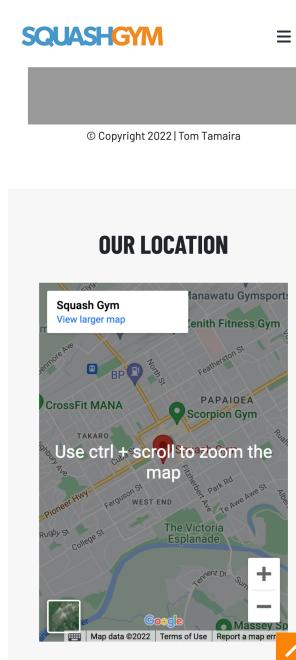

With responsive.css

With responsive.css

Page does not use 100% of display width.

Page uses 100% of display width as expected.

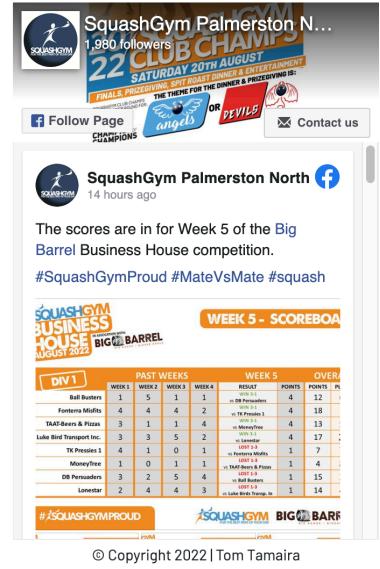

Footer objects are not spaced correctly and are aligned horizontally.

Footer objects are spaced correctly and are aligned vertically.

Facebook Feed Integration

Palmerston North's premier squash club, and so much more!

SquashGym's Facebook page has been integrated into the website's footer to fulfil the design requirement. The integration took advantage of Facebook's Page PHP script: (<https://developers.facebook.com/docs/plugins/page-plugin/>). The feed automatically adapts to the container width, therefore making it responsive and fulfilling the design requirements of ensuring mobile usability.
